Part A
- My object will represent specific media entries (games, shows, movies). It will be used in the 'Discover' feed, alongside the 'Latest' entries
- Some data I would need to store:
  - Title
  - Type (Show, Movie, Game)
  - Cover
  - Rating
  - Genre
- Some task or behaviors:
  - get_url(): Get the url to the review page
  - get_rating(): Get the overall rating
  - get_cover(): Get the cover image
  - get_title(): Gets the title and returns it
